Summary

B.Tech graduate in Computer Science and Engineering (AI & ML) with internship and project experience in backend development, REST APIs, software testing, debugging, and cloud-connected applications. Skilled in Python, Java, JavaScript, SQL, Git, Docker, and API development, with a strong foundation in data structures, object-oriented programming, SDLC, and software quality. Experienced in developing, testing, debugging, and deploying API-driven applications, investigating production issues, and collaborating with cross-functional teams.

Technical Skills

Programming	Python, Java, C, JavaScript, HTML, CSS
Core	Data Structures & Algorithms, Object-Oriented Programming, Complexity Analysis
Backend	Flask, REST APIs, Node.js, Express.js, JSON, API Integration
Software Engineering	SDLC, Agile, Unit Testing, Integration Testing, Debugging, Code Reviews
Cloud/DevOps	Azure Databricks, Docker, GitHub Actions, Git, GitHub
Databases	SQL, MySQL, MongoDB
AI & ML	Generative AI, LLMs, NLP, Transformers, LangChain, RAG

Experience

Business Analyst Intern · Myntra (Flipkart Group)	Jan 2026 – Jun 2026
SQL · Azure Databricks · Data Pipelines · Testing · Production Support	
- Developed and debugged SQL and Azure Databricks data pipelines for large-scale datasets, troubleshooting production data issues and improving pipeline reliability. - Monitored data quality dashboards and investigated production anomalies using root cause analysis in collaboration with cross-functional teams. - Built and unit-tested reusable SQL Views and Databricks notebooks, performing UAT and integration testing to validate data integrity and business logic before releases.	
Software Developer Intern · Technical Hub Pvt Ltd	Jun 2024 – Jul 2024
REST APIs · Backend Development · Testing · Automation · Production Deployments	
- Debugged production defects and improved workflow automation, reducing manual data handling by 40%; developed REST API-integrated backend modules and optimized SOQL queries for customer analytics and data retrieval. - Executed unit testing and UAT across four sandbox-to-production deployments, validating functionality and resolving defects before release.	

Projects

GitNexus – Enterprise Knowledge Platform	React REST API Docker Express.js LangChain RAG
Engineered a self-hosted, microservice-oriented knowledge platform using React, Express.js, and LangChain across 30+ LLM providers, reducing retrieval time from 50 min to 30 sec and API costs by 98%.	
RepoSense – Autonomous Multi-Agent Code Review System	Python Google ADK FastAPI GitHub API SQLite
Developed a FastAPI and GitHub API-based code review platform that analyzes pull requests and generates structured code-quality and risk reports, with integration tests validating core workflows.	
NetGuardian – AI Threat Detection Chrome Extension	React TensorFlow.js Flask REST API
Built a Chrome extension with a Flask REST API and TensorFlow.js inference pipeline for real-time, privacy-preserving content classification and threat detection; selected for the OpenAI Hackathon.	

Certifications

Salesforce Platform Developer - I	Salesforce
Salesforce AgentForce Specialist	Salesforce
IT Specialist – Python	Certiport

Education

Aditya College of Engineering and Technology	Sep 2022 – Sep 2026
B.Tech in Computer Science and Engineering (AI & ML) CGPA: 7.0 / 10
